

OnCore-eBinders Integration

Florence eBinders™ supports integration with OnCore™, MCW's enterprise Clinical Trials Management System, for the automated creation of basic binder folder structures and study team roles in eBinders.

For Support Contact

florence@mcw.edu

- New protocol in OnCore, with key pieces of information entered, and a specific annotation question answered "Yes", causes the integration to create the basic binder structure in eBinders, with the binder name based on OnCore protocol fields
- Staff added to the OnCore protocol with specific roles are then added by the integration to the protocol associated binder in Florence with a Florence role that is mapped from the OnCore role

* The annotation push from OnCore™ to Florence eBinders™ is only available for the first 31 days after the new protocol is entered.
